

“The Republic may perish; the wide arch of our ranged Union may fall; star by star its glories may expire; stone after stone its columns and its capital may moulder and crumble; all other names which adorn its annals may be forgotten; but as long as human hearts shall anywhere pant, or human tongues shall anywhere plead for a true, rational, constitutional liberty, those hearts shall enshrine the memory, and those tongues shall prolong the fame of George Washington.”

(Robert C. Winthrop, in his oration at the laying of the cornerstone of the Monument, July 4, 1848.)

THE WASHINGTON MONUMENT.

THE WASHINGTON MONUMENT occupies a prominent site near the banks of the Potomac, west of the Mall, at the former confluence of the Tiber with the main stream, and half a mile due south of the Executive Mansion. It stands on a terrace 17 feet high. The square of 41 acres in which the Monument stands was designated on L'Enfant's plan of the City of Washington as the site for the proposed Monument to Washington, which was ordered by the Continental Congress in 1783 and approved by Washington himself. The Monument stands close to the intersection of the Jeffersonian meridian line of 1802, passing through the center of the Executive Mansion, north and south, with a line running east and west through the center of the Capitol.

The total height of the Monument above ground is 555 feet 5½ inches; or 597 feet 3 inches above mean low water in the Potomac; or 596 feet 9.36 inches above the mean level of the Atlantic at Sandy Hook, N. Y.; or 592 feet from its foundation bed. The entire height has been made slightly greater than ten times the breadth of base. The Monument is the highest permanent structure in the world.

The estimated number of stones in the shaft is 23,000, and its total weight, including foundation and earth upon it, 81,120 tons. The mean pressure of the Monument is 5 tons per square foot.

The total cost of the structure, in round figures, amounted to about \$1,500,000. The popular subscription reached the sum of \$300,000, and Congress appropriated the necessary balance.

The foundations of the Monument, which bear a weight of 81,120 tons, are constructed of solid blue rock, and are 146 feet 6 inches square, and 36 feet 8 inches deep. The base of the shaft is 55 feet square, and the lower walls are 15 feet thick. At the 500-foot elevation, where the pyramidal top begins, the walls are only 18 inches thick and about 35 feet square. The inside of the walls, as far as they were constructed before the work was undertaken by the Government in 1878—150 feet from the base—is of blue granite, not laid in courses. From this point to within a short distance of the beginning of the top or roof, the inside of the walls is of regular courses of granite, corresponding with the courses of marble on the outside. For the top marble is entirely used.

The marble blocks were cut or “dressed” in the most careful manner, and laid in courses of 2 feet by experienced and skillful workmen. There is no “filling” or “backing” between the granite and marble blocks, but they are all closely joined, the work being declared “the best piece of masonry in the world.” By a plumb-line suspended from the top of the Monument inside, not $\frac{3}{8}$ of an inch deflection has been noticed.

THE KEYSTONE.

The keystone, which binds the interior ribs of stone that support the marble facing of the pyramidal cap of the Monument, weighs nearly five $\frac{1}{2}$ tons. It is 4 feet 6 inches high, and 3 feet 6 inches square at the top.

The topmost stone of the pyramidon was placed in position December 6, 1884. It weighs 3,300 pounds; its height from base to top is 5 feet 2 $\frac{1}{2}$ inches; it is 4 feet 5 $\frac{3}{4}$ inches high on the outer face, with a 7-inch shoulder

to bind on each side, extending $10\frac{1}{2}$ inches below; its base is 3 feet and a fraction square, and 5 inches in diameter at the top where the aluminum top fits in. This is 9 inches in height and $4\frac{1}{2}$ inches at the base, and, weighing 100 ounces, terminates the top stone or cap. This metal was selected because of its lightness and freedom from oxidation, and because it will always remain bright.

The masonry constructed by the Government is the best known to the engineering art, and the weight is so distributed, that, subjected to a wind pressure of one hundred pounds per square foot on any face, corresponding to a wind velocity of one hundred and forty-five miles per hour, the Monument would have a large factor of safety against overturning.

The marble is of the same kind as that in the monolithic columns of the Capitol, has a fine grain, is close and compact in texture, free from disintegrating impurities, and in this climate will endure for ages.

In the proportions of this grandest monumental column ever erected in any age of the world, the ratios of the dimensions of the several parts of the ancient Egyptian obelisk have been carefully followed.

An immense iron-frame structure supports the machinery of the elevator, which is hoisted with steel-wire ropes, 2 inches thick. At one side begin the iron stairs, of which there are 50 flights, containing 18 steps each. 520 feet from the entrance to the Monument, at the base of the pyramidal top, there is a lookout platform containing an area of $1,187\frac{1}{4}$ square feet and 8 windows, 18 x 24 inches, 2 on each face.

It costs the Government about \$20,000 a year to take the public up the 500 feet and down again after they have had a view of the surrounding country from the

top of the Monument. The Sundry Civil Appropriation Bill approved June 6, 1900, appropriated \$20,000 for one dynamo and connections, including installation of new system, and \$6,500 for an addition to the boiler house for use in connection with the installation of electric power. The steam system is in good working order, but is slow and expensive, therefore it will be supplanted by the electric system.

There is enough room in the interior of the Monument to house an army of 12,000 men. The landings will accommodate 7,675 ; the stairs, 3,845 ; the upper and lower platforms, 450 ; and the elevator, 30 men.

On an average, 500 visitors daily ascend to the top of the Monument, either by the staircase of 900 steps or with the elevator

The thirteenth platform is at a height of 152 feet, and it is here where the Government began its work finishing the Monument. This platform does not contain any memorial tablets. The reason for this apparent oversight cannot be ascertained : it may have been the superstitious belief of the builders in the bad omen of the fateful number thirteen which caused them not to honor this platform with any of the Monument's valuable autographs.

One of the stones contributed was a block of African marble from the Temple of Concord at Rome, and was the gift of the Pope. It bore the inscription "Rome to America." In March, 1854, during the Know-Nothing excitement, the lapidarium, where the memorial blocks were kept, was forcibly entered, and this stone was taken, and, it is supposed, was thrown into the Potomac. A reward for its return was offered, but the stone up to this date has not been recovered, and its hiding place remains a secret.

The following are the Inscriptions on the four faces of the aluminum apex of the Monument:

North Face.

Joint Commission at setting of Cap Stone: Chester A. Arthur. W. W. Corcoran, Chairman; M. E. Bell, Edward Clark, John Newton. Act of August 2nd, 1876.

West Face.

Corner Stone Laid on Bed of Foundation July 4th, 1848. First Stone at Height of 152 Feet, Laid August 7th, 1880. Cap Stone Set December 6th, 1884.

South Face.

Chief Engineer and Architect, Thos. Lincoln Casey, Colonel Corps of Engineers. Assistants, George W. Davis, Captain 14th Infantry; Bernard R. Green, Civil Engineer; Master Mechanic, P. H. McLaughlin.

East Face.

Laus Deo.

Inscription on copper plate covering deposit recess of the Corner Stone of the Monument:

4th July, 1776. Declaration of Independence of the United States of America.

4th July, 1848. This Corner Stone Laid of a Monument by the People of the United States to the Memory of George Washington.

James K. Polk, President of the United States and Ex-Officio President of the Board of Managers.

William Brent, First Vice-President. William W. Seaton, Mayor of Washington, 2nd Vice-President. Gen'l A. Henderson, 3rd Vice-President. J. B. H. Smith, Treasurer; George Watterston, Sec'y.

Board of Managers.

Major-Gen'l Winfield Scott, Gen'l N. Towson, Col. J. J. Abert, Col. J. Kearney, Gen'l Walter Jones, Thomas Carberry, Wm. A. Bradley, P. R. Fendall, Thomas Munroe, Walter Lenox, M. F. Maury, Thomas Blagden, Elisha Wittlesey, General Agent.

Building Committee.

Thomas Carberry, William A. Bradley, George Watterston, Col. J. J. Abert.

Committee of Arrangements.

Gen'l A. Henderson, Walter Lenox, Lieut. M. F. Maury; Joseph H. Bradley, Chief Marshal; Robert Mills, Architect.

Contents of the Cornerstone Recess.

Copies of the Constitution and of the Declaration of Independence; Messages of the Presidents, beginning with Washington; the portrait and inaugural address of each President; daguerreotypes of General and Mrs. Washington; a copy of the Bible; astronomical observations by M. Fontaine Maury, U. S. N., for 1845; journals of the Senate and House of Representatives of the Thirtieth Congress; list of the judges of the Supreme Court; an American flag; coat of arms of the Washington family; a set of United States coins, with specimens of Continental money; Harper's illustrated catalogue, and copies of newspapers from each State relating to Washington and the Monument.

The following are copies of the memorial stone inscriptions:

Described from South to North.

CHINA.

" Su-Ki-Yu, by imperial appointment, Lieut. Governor of the Province of Fuh Kun, in his universal Geography says : It is evident that Washington was a remarkable man. In devising plans, he was more decided than Chin-Shing or Wu-Kwang, in winning a country, he was braver than Tsau-Tsau or Lin-Pi. Wielding his four footed falchion, he extended the frontiers thousands of miles, and then refused to usurp the regal dignity, or transmit to his posterity, but first established rules for an elective administration. Where in the world can be found such a public spirit ? Truly, the sentiments of the three dynasties have all at once unexpectedly appeared in our day. In ruling the state, he promoted and fostered good customs, and did not depend on military merit. In this he differed from all other nations. I have seen his portrait, his air and form are grand and imposing in a remarkable degree. Ah, who would not call him a hero ? The United States of America regard it promotive of national virtue generally and extensively neither to establish titles of nobility and royalty nor to conform to the age, as respects customs and public influence, but instead deliver over their own public deliberations and inventions so that the like of such a nation one so remarkable does not exist in ancient or modern times. Among the people of the Great West can any man, in ancient or modern times, fail to pronounce WASHINGTON Peerless ?

" This Stone is Presented by a Company of Christians and engraved at Ningpu in the Province of Che Heang, China, this Third Year of the Reign of the Emperor Heen Fung, Sixth Month and Seventh Day " (July 12th, 1853.)

177. Marble block with the following inscription: TOP OF STATUE ON CAPITOL.

There are altogether 176 memorial tablets; of these were contributed by

States.....	39,	whereof 9 are in a mutilated or decayed condition.
Counties	7	" 0 "
Foreign Countries	10	" 0 "
Cities	20	" 7 "
Societies, Lodges, Associations, military and otherwise	90	" 32 "
Private individuals.....	9	" 1 "
Totally decayed and illegible	1	" 1 "
	<hr/> 176	<hr/> 50

With the aid of a little imagery, one can trace in the peculiar grain and apparently accidental happy laying of the marble blocks on the exterior at a height of about 150 feet on the east side of the Monument, the outlines of a semblance of an immense eagle with wings outstretched, as if protecting the LANDMARK OF LIBERTY against all danger and evil.

HISTORY OF THE MONUMENT.

The Continental Congress, on the 7th day of August, A. D. 1783, unanimously resolved (ten States being represented):

“That an equestrian statue of General Washington be erected at the place where the residence of Congress shall be established, in honor of George Washington, the illustrious commander-in-chief of the armies of the United States of America during the war which vindicated and secured their liberty, sovereignty, and independence.”

On December 19, 1799, the day after the mortal remains of George Washington had been committed to the tomb, a committee of both Houses of Congress was appointed “to report measures suitable to the occasion and expression of the profound sorrow with which Congress is penetrated on the loss of a citizen first in war, first in peace, and first in the hearts of his countrymen.”

In pursuance of the foregoing resolution, both Houses of Congress passed the following resolution on December 24, 1799:

“That a marble monument be erected by the United States in the Capitol, at the City of Washington, and that the family of General Washington be requested to permit his body to be deposited under it, and that the monument be so designed as to commemorate the great events of his military and political life.”

President Adams was authorized to correspond with Mrs. Washington, asking her consent to the removal and interment of her husband's remains beneath a monument, to be erected by the Government in the Capitol.

Mrs. Washington consented in the following beautiful words :

“Taught by the great example I have so long had before me, never to oppose my private wishes to the public will, I must consent to the request of Congress which you had the goodness to transmit to me ; and in doing this I need not—I can not—say what a sacrifice of individual feeling I make to a sense of public duty.”

In 1800 a bill passed one House of Congress “to erect a mausoleum of American granite and marble, in a pyramidal form, 100 feet square at the base, and of a proportional height.”

In 1816 the subject was again discussed, but without effective results.

Congress again made an application in 1832 to the proprietors of Mount Vernon for the removal and deposit of the remains of Washington in the Capitol, in conformity with the resolution of 1799. The legislature of Virginia protested against the movement, and John A. Washington declined the proposal.

In September, 1833, a paragraph appeared in the “*National Intelligencer*” of the City of Washington, calling a meeting of the citizens of Washington to take the matter in hand. In response to that call a meeting of citizens was held at the City Hall on September 26, 1833. It was at this meeting that the Washington National Monument Society was formed, Chief Justice John Marshall, then seventy-eight years of age, having been elected its first President, and Judge Cranch the first Vice-President. George Watterston, who deserves to be signalized as the originator of the movement, was the first secretary.

/ In the advertisements inviting designs for the Monument from American artists, it was recommended that they should “harmoniously blend durability, simplicity, and grandeur.”

The design originally selected for the Monument was that submitted by Robert Mills, comprising, in its main features, a vast stylobate, surmounted by a tetrastyle pantheon ; circular in form, and with an obelisk 600 feet high rising from the center.

In January, 1848, Congress passed a resolution granting a site on any of the unoccupied public ground of the City of Washington, to be selected by the President of the United States and the Washington Monument Society. The site on Reservation 3 was accordingly selected, and title to the land was conveyed to the Society.

On January 29, 1848, it was decided to postpone the laying of the cornerstone until the 4th of July 1848. Objections in the mean time having been made to the plan for the Monument as proposed by sculptor Mills, the Society, pursuant to a report from its committee, in the month of April of that year fixed upon a height of 500 feet for the shaft, leaving in abeyance the surrounding pantheon and base.

The cornerstone was laid in accordance with this decision of the Society on July 4, 1848, in the presence of the members of the executive, legislative, and judicial branches of the Government, foreign ministers and officers, and a vast concourse of citizens from all sections of the Union.

In 1854 the shaft had reached a height of 152 feet above the level of the foundation. Subsequently an addition of four feet was put upon the shaft, making its total height; 156 feet the whole executed at a cost of about \$300,000.

The treasury of the Society having been exhausted, and all efforts to obtain further sums having proved unavailing, the Society presented a memorial to Congress, representing that they were unable to devise any plan likely to succeed, and, under the circumstances, asking that Congress should take such action as it might deem proper. An appropriation of \$200,000 was recommended to be made by Congress "on behalf of the people of the United States to aid the funds of the Society," but complications of a political nature arose in the management of the affairs of the Society, the appropriation recommended was not made, and, for the same reason, a stop was put to the active prosecution of the work on the Monument for a number of years.

On February 26, 1859, Congress gave to the Society a formal charter of incorporation, and President Bu-

chanan presided at the first meeting of this new board, which was held in the City Hall, March 22, 1859. The Society again went vigorously to work, but the condition of the country during the decade from 1860 to 1870 rendered their efforts futile.

In 1873 the Society again presented a memorial to Congress, recommending the Monument to its favorable consideration. In the meantime the Society continued their appeals to the country for a certain gross sum deemed sufficient to complete the Monument. A measurable success met these efforts, and the Society discontinued these efforts only when, on August 2, 1876, an act of Congress appropriating \$200,000 to continue the construction of the Monument had become a law of the land.

On July 5, 1876, Senator John Sherman moved the adoption of a joint resolution, declaring, after an appropriate preamble, that the Senate and House of Representatives in Congress assembled, "in the name of the people of the United States, at the beginning of the second century of the National existence, do assume and direct the completion of the Washington Monument in the City of Washington." A bill in pursuance of this joint resolution was passed unanimously in the Senate on July 22, 1876, in the House of Representatives without opposition on the 27th of July, and was signed by President Grant on August 2, 1876. By this act, which gave a Congressional expression to the national gratitude, a joint commission was created, to consist of the President of the United States, the Supervising Architect of the Treasury Department, the Architect of the Capitol, the Chief of Engineers of the United States Army, and the First Vice President of the Washington National Monument Society, under whose direction and supervision the construction of the Monument was placed. According to a provision in the same act, the Washington National Monument Society transferred and conveyed to the United States, in due form, all the property, rights, and assessments belonging to it in the Monument, the conveyance being legally recorded in the proper court register.

From the early days of the construction there had been apprehension that the foundation of the Monument was not of sufficient size to sustain the column if carried to the height originally designed. On the 10th of April and 15th of June, 1877, a Joint Commission of Congress reported that the existing foundation was of insufficient spread and depth to sustain the weight of the completed structure, but that it was feasible to bring the foundation to the required stability by hooping in the earth upon which it stood. The weakness of the old foundation lay in the fact that it was too shallow and covered an area of ground insufficient to sustain the pressure of the completed work. The strengthening consisted in the enlargement of the foundation by spreading it over a greater area and sinking it a greater depth into the earth. The work of excavating beneath the Monument was commenced January 28, 1879, and the new foundation was finished May 29, 1880. The cost of the new enlarged foundation amounted to \$94,474.

The cornerstone of the Monument was laid July 4, 1848; the first marble block under Government supervision was set in the shaft August 7, 1880, and the last stone was placed at the level five hundred, August 9, 1884, thus consuming four seasons finishing the shaft. The topmost stone of the pyramidon was set December 6, 1884, thus essentially completing the obelisk.

On February 21, 1885, in the presence of the executive, legislative, and judicial officers of the Government, officers of the Army, the Navy, the Marine Corps, and the Volunteers, the Diplomatic Corps, eminent divines, jurists, scientists, and journalists, venerable citizens representing former generations, the National Monument Society, and the Masonic fraternity, the Washington Monument was dedicated. Senator Sherman, in the course of his oration, said :

"The Monument speaks for itself,—simple in form, admirable in proportions, composed of enduring marble and granite, resting upon foundations broad and deep, it rises into the skies higher than any work of human art. It is the most imposing, costly, and appropriate monument ever erected in the honor of one man."

Prayer was offered by the Rev. Henderson Suter, Rector of Christ Church, Alexandria, Va., where Washington worshipped.

James C. Welling, LL. D., President of Columbian University, read an address which had been prepared by W. W. Corcoran, First Vice President of the Washington National Monument Society, comprising the full history of the Monument.

The reading of this address was followed by the Masonic dedicatory ceremonies, which were performed by the Grand Lodge of Free and Accepted Masons of the District of Columbia.

Col. Thomas Lincoln Casey, of the Corps of Engineers, United States Army, the Chief Engineer and Architect of the Monument, then formally delivered the structure to the President of the United States, making a short address, in which he reviewed the structural work of the Monument.

President Arthur accepted the Monument, making a short dedicatory address, after which a procession formed and moved to the Capitol. Here orations were delivered by Robert C. Winthrop of Massachusetts, and John W. Daniel, Senator of Virginia.

After the benediction had been pronounced the President of the United States, the members of the Supreme Court, and the invited guests retired from the hall at 5 o'clock.

“Yonder shaft,
Which States and peoples piled the stones upon,
That from its top the very winds might waft
To distant shores the name of Washington.”
